Internal & External Defense Mechanisms

Implement the requirements of joint defense and control mechanisms

- Cooperate with airport, customs, border inspection and other relevant units to share information
- Strictly implement the health declaration system

Strengthen flight operation control in the process of overseas epidemic prevention and control

• The control of mandatory seat retention in the sales system, 75% capacity within flights available for sale

Air: flight risk level management

- According to the relevant requirements of Civil Aviation Administration, carry out risk classification management on international flights
- Carry out differentiated disinfection and cleaning, personnel health protection and service adjustment according to risk classification

Ground: strictly control the health status of passengers

- Adjust the ground interception procedures for passengers with suspected symptoms
- Collect passenger health information at all links on the ground as required, and strictly prevent "boarding with illness"
- Adjust international and regional ground services to minimize the risk of epidemic transmission

Building national prevention and control mechanisms

Strictly guard the first line of defense in Beijing

According to the regulations of the Civil Aviation Administration, the Ministry of foreign
affairs, the national health and Health Commission, the General Administration of
customs, the State Administration of immigration and other relevant units, all international
passenger flights destined for Beijing must enter from the designated first entry point.

Air China responds quickly, to adjust flight arrangements, as well as organize a first entry point business department in order to establish a linkage mechanism with Beijing authorities, to implement a series of measures for international flights to Beijing

Air China strictly implements novel coronavirus pneumonia management guidelines, and fully cooperates with Beijing to prevent and control imported pneumonia.

Air China ground service personnel provide services for passengers

Air China capital airport ground stafff wear protective clothing

On board cleaning and disinfection

Post flight cleaning and disinfection

Cleaning and disinfection

Cleaning and disinfection of flight suspected of Covid-19 risk

Convective ventilation after flight

Clean the aircraft thoroughly after flight Carry out preventive disinfection after the completion of post flight cleaning

Flights carrying suspicious passengers, shall have the aircraft thoroughly ventilated after the flight, disinfect the seat area and washrooms, clean them according to the requirements of post flight cleaning, and finally disinfect them according to the principle guidelines

If the cabin is polluted with infectious risk, disinfection will be carried out multiple times.

If suspected contaminant with infectious risk is found in the cargo hold, the cargo hold shall be disinfected at the end of the voyage

During the epidemic period, flights shall have the front and rear and left and right side doors of the aircraft shall be opened at the same time for at least one hour convection ventilation

*The standards for on-board cleaning and disinfection will be adjusted according to the relevant requirements of CAAC and the change of epidemic situation

Ground Service Prevention Controls

Close remote and self check-in channels

- Close the remote check-in service of international and regional return flights
- Close the self check-in function of international and regional terminals

Closely monitor the health status of passengers

- All international and regional terminals should take temperature measurements of passengers during check-in, waiting and boarding to prevent boarding with illness
- All international and regional terminals need passengers to fill in the passenger notification and epidemic investigation form, and make follow-up arrangements according to the information filled in

Actively implement relevant requirements of joint prevention and control

- In accordance with the requirements of local governments and airports, work closely with relevant units of joint defense and joint control to provide relevant services for passengers and inform them of relevant information

Onboard service adjustment

Meal adjustment

Flights from some European cities and the United States to China:

- Prepackaged food and bottled drinking water only

- Except for special needs, there is no food service on board

- Suspension of special meal service of Air China's actual flights

Health prevention and control

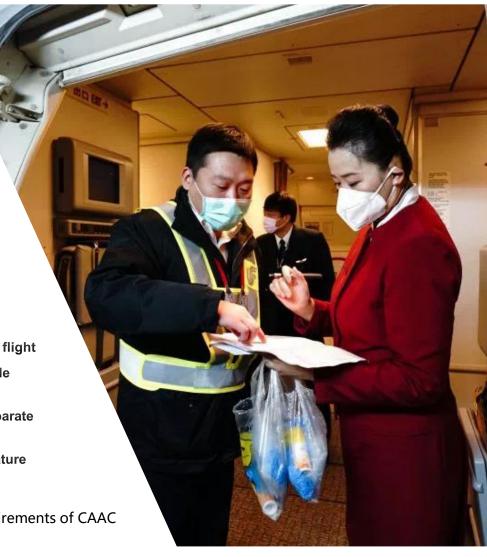

- On board temperature detection during operation of long-distance flight

- The flight attendants provide services in different areas and provide personal protection according to the flight risk level

- On the premise of ensuring safety, arrange passengers to take separate seats as much as possible

- Arrange seats for passengers from epidemic areas whose temperature does not exceed the standard

*The onboard service will be adjusted according to the relevant requirements of CAAC and the change of epidemic situation

Pilot & Cabin Crew Quarantine Guidelines

Domestic day round trip: 14 day isolation is not required, no mandatory isolation in the community

Domestic overnight: forced 14 day home shelter in place quaratine, restricted access within community

All international flights: compulsory centralized isolation for 14 days, additional mandatory home isolation for 7 days after the initial governmental 14 days has been completed

Ground Service Disinfection

Air China ground transportation vehicles

- Ventilate and disinfect the passenger transport after passengers have been transported to/from aircraft
- Increase the number of transports and limit the number of passengers to 50% capacity.
- Each transport unit is equipped with disinfectant, which is sterilized once transport is completed
- Set up special garbage trucks within epidemic areas for special handling of the waste
- Disnfection of catering, disembarking vehichle equipment

Air China operated lounges

- All tableware and cups shall be replaced with disposable tableware, paper cups or plastic cups
- All drinks can only be packaged in small bottles
- No magazines, newspapers, showers, sleeping rooms shall be available during this period

Adjustment of ticketing, service and product rules

Adjust ticketing rules

 According to the actual situation of the epidemic situation, Air China has successively issued ticket regulations, such as Air China ticket free refund regulations, adjustment of capacity of multiple international routes, ticket refund regulations, student passenger ticket refund regulations, etc., to timely inform passengers of changes in ticket regulations

Adjust service and product rules

- According to the current situation, Air China will suspend the services for unaccompanied children, wheelchair passengers, stretcher passengers and other six categories of special passengers from international and regional flights to China
- Adjust some value-added additional service products, such as shuttle bus transfer, cabin upgrade, transit accommodation, etc
- Release alerts and tips on passengers' travel information
