

New PCR test requirement for travellers on Qatar Airways from Tanzania

Dear Trade Partner,

Effective 2 March 2021, customers travelling on Qatar Airways flights from ZNZ, DAR and JRO will be required to present a negative PCR test certificate from an authorised laboratory prior to departure.

The PCR test certificate must be issued within 96 hours prior to departure, or within a shorter time period where mandated by a local authority.

In addition to the original PCR test certificate, a [signed consent form](#) must also be provided at the airport. Customers without these documents will not be permitted to travel. Children under 12 are exempt when travelling with their family.

Additional UK government restrictions may apply. Please check the gov.uk website for the latest travel information.

Thank you for your support.

Your Qatar Airways Team
